

**PROPOSALS 2.3M ARISTARCHOS TELESCOPE 2016**

<b>ATP No</b>	<b>P.I.</b>	<b>TITLE</b>
2016-01	Alikakos	Active binaries - Accretion disks
2016-02	Blinov	Monitoring the optical Spectral Energy Distribution during rotations of the polarisation plane for understanding the mechanism producing these rotations
2016-03	Bonanos	High cadence photometry of bright supernovae
2016-04	Boumis	Linking nova shells, planetary nebulae and type Ia supernova remnants
2016-05	Boumis	On the stability of bow-shocks generated by runaway massive stars
2016-06	Boumis	Revealing the morphological features of New IPHAS Planetary Nebulae
2016-07	Christopoulou	Eclipse Timing Variations (ETVP) Programme
2016-08	Gazeas	Contact binaries towards merging
2016-09	Gazeas	Investigating a possible black hole binary
2016-10	Kopsacheili	Supernova Remnants Detection in nearby Galaxies
2016-11	Leonidaki	Supernova Remnants: powerful agents of molecular cloud evolution and star-formation feedback - IC 443 as a case study
2016-12	Liakos	Spectral classification of selected Kepler oEA stars
2016-13	Nanouris	Monitoring the orbital evolution of short-period detached binary systems
2016-14	RISE2 - ExP	Detecting Transit-Timing variations (TTV) of extrasolar planets using RISE2
2016-15	Vika	Exploring The Outlying High SMBH-To-Bulge Mass Ratios
2016-16	Xilouris	The structure of extragalactic bars in spiral galaxies
