

**PROPOSALS 2.3M ARISTARCHOS TELESCOPE 2019**

<b>ATP No</b>	<b>P.I.</b>	<b>TITLE</b>
2019-01	Alikakos	Close binaries - Accretion disks
2019-02	Bonanos	Explosions from start to finish: deep late-time imaging of supernovae detected shortly after explosion
2019-03	Bonanos	Stellar and super-massive black holes in Gaia transients
2019-04	Boumis	Ageing Nova Shells
2019-05	Boumis	Revealing the morphological features of New IPHAS Planetary Nebulae
2019-06	Christopoulou	Orbital Solutions for Catalina Sky Surveys Eclipsing Binaries of W UMa Type showing Total Eclipses
2019-07	Chiotellis	A66 6: A second runaway Planetary Nebula in the vicinity of HFG1
2019-08	Derlopa	Morphological and kinematical study of large Galactic Supernova Remnants
2019-09	Gazeas	Total Eclipses of W UMa type stars as probes for stellar evolution
2019-10	Gazeas	Investigating a possible black hole binary
2019-11	Koulouridis	Redshift confirmation of X-Class survey clusters
2019-12	Lalounta	High precision multicolor photometric study of low mass ratio, short period contact binaries
2019-13	Loukaidou	Contact binaries towards merging
2019-14	Paraskeva	Early high-cadence observations of supernovae: revealing features of short time variability
2019-15	Xilouris	The structure of extragalactic bars in spiral galaxies
